

Section	Ask	Points	What good looks like	What average looks like	What poor looks like	% Weightage
		60	80-100%	60-80%	<60%	100.00%
Data Loading and Model Initialization	- Load the SQLite DB - Load the CSV files - Ingest PDF for RAG - Set up the LLM and LangSmith Traceability	5	1) SQLite DB loaded & schema mapped [1] 2) CSV files loaded [1] 3) RAG pipeline for policy PDF set up [1.5] 4) LLM configured with appropriate parameters and LangSmith Traceability set up [1.5]	1) DB and CSVs loaded properly 2) RAG pipeline is missing or poorly chunked 3) LLM is set up	1) Only CSV data loaded 2) LLM setup	8.33%
Defining Tools	Define a list of tools for the AI Agent - Tool to read delivery logs - Tool to read customer data from database - Tool to read locker data from database - Tool to retrieve playbook excerpts via RAG * The set of tools to be used can be modified as required, as long as they can provide the relevant information to the Multi-Agent System to pass the test cases	9	All required tools accurately defined 1) Tool to read delivery logs [2] 2) Tool to read customer data from database [2] 3) Tool to read locker data from database [2] 4) Tool to retrieve playbook excerpts via RAG [3] * The set of tools to be used can be modified as required, as long as they can provide the relevant information to the Multi-Agent System to pass the test cases	1) DB tools defined 2) RAG tool defined	1) Only DB tools defined	15.00%
Defining the Multi-Agent System Architecture	Define the multi-agent architecture - Define Multi-Agent State - Define Sub-agents - Define Prompts - Define Agent Nodes - Define Routing - Define Escalation logic - Address data and agent security - Visualize the workflow * The set of sub-agents and nodes, and workflow architecture to be used can be modified as required, as long as they can provide the relevant information to the Multi-Agent System to pass the test cases	17	1) Defined Multi-Agent State [2] 2) Defined Sub-agents (Routing, Resolution, Communication, Critic) [4] 3) Defined Prompts [4] 4) Defined Agent Nodes [2] 5) Defined Routing logic correctly [1] 6) Defined Escalation logic correctly [1] 7) Addressed data security to ensure PII redaction [1] 8) Addressed agent security by implementing prompt injection mitigation [1] 9) Visualized the workflow [1] * The set of sub-agents and nodes, and workflow architecture to be used can be modified as required, as long as they can provide the relevant information to the Multi-Agent System to pass the test cases	1) Defined Multi-Agent State 2) Defined Sub-agents, but the tasks are not logically divided 3) Defined Prompts 4) Defined Agent Nodes 5) Defined Routing logic, but it doesn't make complete logical sense 6) Visualized the workflow	1) Defined Single-Agent 2) Defined Prompts 3) Defined Routing logic, but it doesn't make complete logical sense	28.33%

Test Cases Execution, Evaluation, and Observability	- Execute all test cases - Print the evaluation metrics for each test case - Print traces & document citations for all test cases - Provide observations based on the outputs received for each test case - Compute aggregate metrics combining all test cases * Metrics to compute are Task Completion Rate, Escalation Accuracy, Tool Call Accuracy, Reasoning Trajectory Coherence, and Latency	17	1) All 10 test cases executed [4] 2) Printed output metrics for all test cases [4] 3) Printed traces & document citations for all test cases [4] 4) Provided observations based on the outputs received for each test case [2] 5) Aggregate metrics accurately computed [2] 6) Task Completion Rate $\geq 60\%$ [1]	1) 4-8 test cases executed 2) Printed output metrics for some test cases 3) Aggregate metrics accurately computed 4) Some observations provided 5) Task Completion Rate between 40% and 60%	1) <4 test cases executed 2) Some observations provided	28.33%
Conclusions and Business Recommendations	Key takeaways for the business	4	1) 3-4 Actionable Insights are mentioned [2] 2) 2-3 Recommendations are mentioned [2] [Recommendations can also include points on additional data sources for further analysis, model implementation in real world, potential business benefits from improving the model, etc.]	1) 1-2 Actionable Insights mentioned 2) 1 Recommendation mentioned	Any Actionable Insights or Recommendations mentioned	6.67%
Presentation/Notebook - Overall Quality	- Structure and flow - Crispness - Visual appeal - Conclusion and Business Recommendations OR - Structure and flow - Well commented code - Conclusion and Business Recommendations	8	1) Clear structure and flow - everything sits well in a story [3] 2) Crispness (Not too many words, just enough to keep the focus on key things/points) [3] 3) Visual appeal (Use of charts, colors, diagrams, format, symmetry, informative visualizations that are easy to interpret) [2] OR 1) Well structured notebook with a logical flow [4] 2) Clean and well commented code [4]	1) There is structure and flow but some bits are jumbled 2) Points are made but in too many words 3) Lesser charts, format is not the cleanest OR 1) There is structure and flow but some bits are missing 2) Some of the code is commented * If any section is missing and points have been deducted for the same in a previous section, then no points should be deducted in this section	1) No structure or flow 2) Only a few points are covered, story is not complete 3) Not many visuals used OR 1) no structure or flow 2) no comments in the code	13.33%
